# Dojo 4 Description

Create a WPF application which looks like this:

The Firstname, lastname, Social Security Number and the Birthdate could be entered and added to the Grid via the "Add" Button.

Use a DatePicker for adding the date. (Bind to `SelectedDate` to get the selected date)

The Add Button is only enabled if the lastname contains more than 2 letters.

The added data is displayed in the datagrid.

The data of the datagrid could be loaded from an csv file. The load Button is enabled if the file exists. The Save button is enabled if at least one entry is added to the datagrid.

Use the File class to read and write data to file in an simple way.
